

PROGRESSIVE PEDIATRIC THERAPY

progressivepediatrics1@gmail.com | 703.606.6213

21st Century!!

We've officially joined the 21st century! Please find us on Twitter—@progressiveped1
Check out our amazing first tweet—Courtesy of [Usher](#) and [Sesame Street](#)!!

Its back to school time! Good luck to all of our rising school kids. It will be a great and exciting time.
If you need extra support, please do let us know.

Please be patient while we all adjust to our new schedules!!

Please help us say goodbye to our great OT student, Kaitlyn Allen. A small bird tells me that we *may* be seeing her again... when she graduates!! Best of luck Kaitlyn!

MOVERS AND SHAKERS

As summer ends, we are excited to begin planning for our fall OT/PT social group, Movers and Shakers! This group, meeting on Tuesdays at 4:30, will be 8 weeks long, beginning on October 2nd and running through November 20th. For these 8 weeks, Movers and Shakers will be led by an occupational therapist and physical therapist and will explore therapeutic, play-based activities designed to facilitate social skills such as social and group problem solving, working as a team, communication skills, and turn taking. Cost is \$720 for all 8 weeks. Space is limited, so please contact us or your therapist if you are interested!

From our suggested reading desk:

Why are our children so bored at school, cannot wait, get easily frustrated and have no real friends?

Dear readers, I published this article in May 2016. Within a year it has been read by six million people. The article was translated into 15 languages, I received thousands of comments from parents, teachers, and professionals sharing my concerns. The overwhelming response to my article proves that people all around the world share my concerns regarding the well-being of their children and change in the way we raise our children is inevitable. Thank you.

— Victoria Prooday

I am an occupational therapist with 10 years of experience working with children, parents, and teachers. In my practice, I have seen and continue to see a decline in kids' social, emotional, and academic functioning, as well as a sharp increase in learning disabilities and other diagnoses.

Today's children come to school emotionally unavailable for learning, and there are many factors in our modern lifestyle that contribute to this. As we know, the brain is malleable. Through environment, we can make the brain "stronger" or make it "weaker". I truly believe that, despite all our greatest intentions, we unfortunately remold our children's brains in the wrong direction. Here is why:

1. Technology

Using technology as a "Free babysitting service" is, in fact, not free at all. The payment is waiting for you just around the corner. We pay with our kids' nervous systems, with their attention, and with their ability for delayed gratification. Compared to virtual reality, everyday life is boring. When kids come to the classroom, they are exposed to human voices and adequate visual stimulation as opposed to being bombarded with the graphic explosions and special effects that they are used to seeing on the screens. After hours of virtual reality, processing information in a classroom becomes increasingly challenging for our kids because their brains are getting used to the high levels of stimulation that video games provide. The inability to process lower levels of stimulation leaves kids vulnerable to academic challenges. Technology also disconnects us emotionally from our children and our families. Parental emotional availability is the main nutrient for child's brain. Unfortunately, we are gradually depriving our children of that nutrient.

2. Kids get everything they want the moment they want

"I am Hungry!!" "In a sec I will stop at the drive thru" "I am Thirsty!" "Here is a vending machine." "I am bored!" "Use my phone!" The ability to delay gratification is one of the key factors for future success. We have the best intentions -- to make our children happy -- but unfortunately, we make them happy at the moment but miserable in the long term. To be able to delay gratification means to be able to function under stress. Our children are gradually becoming less equipped to deal with even minor stressors, which eventually become huge obstacles to their success in life.

The inability to delay gratification is often seen in classrooms, malls, restaurants, and toy stores the moment the child hears “No” because parents have taught their child’s brain to get what it wants right away.

3. Kids rule the world

“My son doesn’t like vegetables.” “She doesn’t like going to bed early.” “He doesn’t like to eat breakfast.” “She doesn’t like toys, but she is very good at her iPad” “He doesn’t want to get dressed on his own.” “She is too lazy to eat on her own.” This is what I hear from parents all the time. Since when do children dictate to us how to parent them? If we leave it all up to them, all they are going to do is eat macaroni and cheese and bagels with cream cheese, watch TV, play on their tablets, and never go to bed. What good are we doing them by giving them what they WANT when we know that it is not GOOD for them? Without proper nutrition and a good night’s sleep, our kids come to school irritable, anxious, and inattentive. In addition, we send them the wrong message. They learn they can do what they want and not do what they don’t want. The concept of “need to do” is absent. Unfortunately, in order to achieve our goals in our lives, we have to do what’s necessary, which may not always be what we want to do. For example, if a child wants to be an A student, he needs to study hard. If he wants to be a successful soccer player, he needs to practice every day. Our children know very well what they want, but have a very hard time doing what is necessary to achieve that goal. This results in unattainable goals and leaves the kids disappointed.

4. Endless Fun

We have created an artificial fun world for our children. There are no dull moments. The moment it becomes quiet, we run to entertain them again, because otherwise, we feel that we are not doing our parenting duty. We live in two separate worlds. They have their “fun” world, and we have our “work” world. Why aren’t children helping us in the kitchen or with laundry? Why don’t they tidy up their toys? This is basic monotonous work that trains the brain to be workable and function under “boredom,” which is the same “muscle” that is required to be eventually teachable at school. When they come to school and it is time for handwriting their answer is “I can’t. It is too hard. Too boring.” Why? Because the workable “muscle” is not getting trained through endless fun. It gets trained through work.

5. Limited social interaction

We are all busy, so we give our kids digital gadgets and make them “busy” too. Kids used to play outside, where, in unstructured natural environments, they learned and practiced their social skills. Unfortunately, technology replaced the outdoor time. Also, technology made the parents less available to socially interact with their kids. Obviously, our kids fall behind... the babysitting gadget is not equipped to help kids develop social skills. Most successful people have great social skills. This is the priority!

The brain is just like a muscle that is trainable and re-trainable. If you want your child to be able to bike, you teach him biking skills. If you want your child to be able to wait, you need to teach him patience. If you want your child to be able to socialize, you need to teach him social skills. The same applies to all the other skills. There is no difference!

You can make a difference in your child’s life by training your child’s brain so that your child will successfully function on social, emotional, and academic levels. Here is how:

1. Limit technology, and re-connect with your kids emotionally

- Surprise them with flowers, share a smile, tickle them, put a love note in their backpack or under their pillow, surprise them by taking them out for lunch on a school day, dance together, crawl together, have pillow fights
- Have family dinners, board game nights, go biking, go to outdoor walks with a flashlight in the evening

2. Train delayed gratification

- Make them wait!!! It is ok to have “I am bored“ time – this is the first step to creativity
- Gradually increase the waiting time between “I want” and “I get”
- Avoid technology use in cars and restaurants, and instead teach them waiting while talking and playing games
- Limit constant snacking

3. Don't be afraid to set the limits. Kids need limits to grow happy and healthy!!

- Make a schedule for meal times, sleep times, technology time
- Think of what is GOOD for them- not what they WANT/DON'T WANT. They are going to thank you for that later on in life. Parenting is a hard job. You need to be creative to make them do what is good for them because, most of the time, that is the exact opposite of what they want.
- Kids need breakfast and nutritious food. They need to spend time outdoor and go to bed at a consistent time in order to come to school available for learning the next day!
- Convert things that they don't like doing/trying into fun, emotionally stimulating games

4. Teach your child to do monotonous work from early years as it is the foundation for future "workability"

- Folding laundry, tidying up toys, hanging clothes, unpacking groceries, setting the table, making lunch, unpacking their lunch box, making their bed
- Be creative. Initially make it stimulating and fun so that their brain associates it with something positive.

5. Teach social skills

- Teach them turn taking, sharing, losing/winning, compromising, complimenting others , using "please and thank you"

From my experience as an occupational therapist, children change the moment parents change their perspective on parenting. Help your kids succeed in life by training and strengthening their brain sooner rather than later!
